

## Ergonomic Analysis

1.

2.

3.

4.

### Amazon Mouse

- I liked the amount of coverage my hand touched on this mouse
- A1-A3 and B1-B3 were completely supported and felt natural on the mouse
- F1-F3 were also supported, which I feel is important, but not as much so as A1 and B1

### Apple Mouse

- Overall, I was happy with the amount of coverage, but it didn't fit like a glove like the Amazon mouse
- A1 and A2 were supported well and I find that important since A1 is the key finger used
- F1-F4 were also covered well but I don't find this as important in a mouse

## Microsoft Mouse

- There was hardly any support for A1, B1 and C1 (which can be seen by the lighter paint marks than the previous two paintings)
- F1-F3 were supported almost too well, to the point where it was uncomfortable
- I don't like having my ring finger on the mouse and C1-C3 were completely on the mouse

## Lenovo Mouse

- Basic support in A1, B1 but nothing compared to the first two models
- Too much support in F1 and F3 with absolutely no support in F4
- C2 and C3 were sitting on the mouse which I don't prefer
- I ranked this one last because of the overall uncomfortableness
